ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: LIGHTNING PROTECTION MEANS FOR A WIND TURBINE

(57) Abstract: The invention relates to means capable of avoiding electrical current, which is being induced in the blades of a wind turbine, from being passed on to parts of the wind turbine that may be damaged or even destroyed by the electrical current. The invention benefits from the fact that the electrical current is passed along by means of electrical conductors extending from the blades and to a stationary part of the wind turbine in relation the flange of the wind turbine for mounting the hub of the wind turbine to the main shaft of the wind turbine, and where the electrical conductors lead either through or past the mounting flange of the wind turbine.
